## Abstracts

According to our (Global Info Research) latest study, the global Multimode Fiber Optic Cable market size was valued at USD 1212.1 million in 2023 and is forecast to a readjusted size of USD 1805.4 million by 2030 with a CAGR of 5.9% during review period.

Multimode fiber optic cable has a large diametral core that allows multiple modes of light to propagate. Because of this, the number of light reflections created as the light passes through the core increases, creating the ability for more data to pass through at a given time.

Because of the high dispersion and attenuation rate with this type of fiber, the quality of the signal is reduced over long distances. This application is typically used for short distance, data and audio/video applications in LANs. RF broadband signals, such as what cable companies commonly use, cannot be transmitted over multimode fiber.

The Global Info Research report includes an overview of the development of the Multimode Fiber Optic Cable industry chain, the market status of Data Centers (OM1, OM2), High Performance Computing Centers (OM1, OM2), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Multimode Fiber Optic Cable.
