Abstracts

According to our (Global Info Research) latest study, the global Multimode Fiber Optic Transceivers market size was valued at US\$ 5360 million in 2024 and is forecast to a readjusted size of USD 11000 million by 2031 with a CAGR of 10.9% during review period.

The multimode fiber optic transceiver has functions such as address filtering, network segmentation and intelligent alarm, which can improve network work efficiency and network operation reliability. It can realize high-speed long-distance interconnection of up to 5 kilometers without relay computer data network. The product performance is stable and reliable, the design conforms to the Ethernet standard, and there are lightning protection measures. It is especially suitable for various broadband data networks and fields that require high-reliability data transmission or the establishment of IP data transmission private networks.

Rapid advancements in smart technologies across the globe, rising internet penetration, innovation, and digitization are driving the growth of the market revenue. Growing demand for coherent optics for pluggable transmitters leading market players is driving market revenue growth. Long-haul and metropolitan area networks have undergone a revolution thanks to the advent of coherent optical transceivers, which enable longer distance, higher capacity, and higher spectral efficiency transmission. The market in Asia Pacific is expected to witness the highest revenue growth during the forecast period owing to the growing demand for optical transceivers in 5G networks. With the installation of base stations and more advanced 5G technology, and the advanced development and upgrade of bearer networks, the demand for optical chips used in communication networks will soar. The commercialization of 5G technology is

facilitating the development of 5G wireless and mobile networks. The density of base stations has increased significantly, which puts forward higher requirements for delay, bandwidth and network flexibility, which in turn puts forward higher requirements for 5G network design and related transmission technologies. Improving performance of fiber optic transceivers used in 5G networks is contributing to market revenue growth in this region.
