## Abstracts

According to our (Global Info Research) latest study, the global Multiple-Input Micro Inverter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Single microinverters in the industry can only connect one component, and because they cannot share internal circuits, they have problems such as low integration and high cost per watt. Through the innovation of circuit design and control algorithm, multiple components are used for independent input, sharing the main control module, communication module, DC-DC module, DC-AC module, etc., while ensuring the working synergy of multiple components after independent input, and significantly reducing the number of components. The usage quantity improves product integration, reliability and installation efficiency, and reduces the cost per watt.
