MILES is a set of lasers and laser sensors, which is fastened on armed personnel, weapons, and vehicles to provide realistic training environment to the soldiers. During training, when soldiers fire at their opponents, it emits laser beams instead of ammunition. If the laser successfully hits a soldier, or sensor, or an opponent vehicle, the computer considers it as lethal and a signal notifies that the target has been eliminated from the exercise.

Scope of the Report:

This report studies the Multiple Integrated Laser Engagement System market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Multiple Integrated Laser Engagement System market by product type and applications/end industries.

As the use of realistic weapons in training can prove fatal and life-threatening, there is application of artificial and close-to-reality equipment for the soldiers to experience the realistic battlefield atmosphere. The weapons are substituted with lasers and laser detectors for live ammunition, which enables realistic force-on-force training. Such devices also help analyze the performance of the soldiers.

The use of MILES in live trainings enhances the comprehensive training skills, improves situational awareness and joint decision-making processes in a shorter timeframe. Such training systems are very similar to the laser detectors, which reduces the expenditure on external training.
