Abstracts

A multiple rocket launcher (MRL) or multiple launch rocket system (MLRS) is a type of rocket artillery system. Rockets have different capabilities than artillery, like longer range, and different payloads, for example considerably larger warheads, or multiple warheads. Unguided rocket artillery is notoriously inaccurate and slow to reload, compared to artillery. To overcome this, rockets are combined in systems that can launch multiple rockets simultaneously. Modern rockets can use GPS or inertial guidance, to combine the advantages of rockets with high accuracy.

Scope of the Report:

This report focuses on the Multiple Rocket Launchers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The multiple rocket launcher industry is relatively concentrated: due to the high barriers (technical barriers and material resources), only limited countries are involved in the business. Major manufacturers of multiple rocket launchers are mainly in US, Russia and China.

Multiple rocket launchers downstream is mainly military industry. In recent years, for the reason to restrain the ISIS from destroying the world peace, the demand for multiple rocket launchers will correspondingly increase.

The worldwide market for Multiple Rocket Launchers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
