The global Multiple Vacuum Filtration System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Filtration Apparatus can be closed, open or aseptic operation in working. Simple operation, all stainless steel material can filter acid and alkaline substances, high-temperature resistance. Only one pump can filter multiple samples simultaneously, improving the laboratory's efficiency. Each filter rack has a separate control valve, allowing single and multiple connections to operate simultaneously. Liquid filtration can be carried out convenient and practical. The filtered liquid can be recycled, and the connecting and sealing parts are made of silicone rubber, which is non-polluting and close to the filtered liquid.
