Abstracts

Multispectral scanners are installed on aircraft. The scanning mirror of the scanner rotates to make the received instantaneous field of view move perpendicular to the flight direction, so as to realize scanning. Due to the forward motion of the aircraft, the scanner completes two-dimensional scanning. The multi spectral remote sensing image information can be obtained by scanning the ground image point by point and measuring it point by point and band.

According to our (Global Info Research) latest study, the global Multispectral Scanners market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
