Abstracts

The global Multistage Chemical Canned Motor Pump market size is expected to reach \$ 410.4 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

The Multistage Chemical Canned Motor Pump is gaining significant attention in today's market trends as an efficient fluid transportation solution. This pump combines closed motor technology with a multi-stage pump design, aiming to meet the stringent requirements of the chemical industry for liquid transport. Its unique design enables it to deliver exceptional performance and safety in the conveyance of hazardous chemicals. The compact, sealless design effectively reduces the risk of leaks and contamination, addressing the growing environmental concerns in the market.

The canned electric pump is composed of a canned motor and a pump as a whole. The inner surface of the stator and the outer surface of the rotor are covered with a thin-walled non-magnetic corrosion-resistant metal cylinder. The stator winding and rotor core are completely separated from the conveying medium and will not be corroded by the conveying liquid. In addition, the impeller is directly installed on the shaft extension end of the rotor, and the entire rotor body is immersed in the conveying fluid. There are no rotating parts that communicate with the outside world, making it a leak-free structure.

This report studies the global Multistage Chemical Canned Motor Pump production, demand, key manufacturers, and key regions.
