According to our (Global Info Research) latest study, the global Multitouch Screen HMI market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Multitouch Screen HMI (Human-Machine Interface) refers to a type of interface technology that allows users to interact with a device or system using multiple touch points simultaneously. It enables users to perform various actions such as tapping, swiping, pinching, and zooming on a screen using multiple fingers or touch points.

Multitouch screen HMIs are commonly used in smartphones, tablets, laptops, and other electronic devices. They provide a more intuitive and user-friendly way of interacting with the device, as users can perform multiple actions at the same time, similar to how they would interact with physical objects in the real world.

In industrial settings, multitouch screen HMIs are also used in control panels and operator interfaces for machinery and equipment. They allow operators to easily navigate through menus, control parameters, and monitor processes using gestures and touch inputs.
