The global Multivitamin Chewables market size is expected to reach \$ 736.6 million by 2030, rising at a market growth of 6.0% CAGR during the forecast period (2024-2030).

Growing Emphasis on Health and Wellness: The global focus on health and wellness has driven the demand for multivitamin supplements, including chewable formats. Consumers are increasingly seeking convenient and enjoyable ways to support their overall health, leading to the popularity of chewable multivitamins as a tasty and easy-to-administer option.

Preference for Convenience and Compliance: Chewable multivitamins appeal to consumers who find traditional pill or capsule formats difficult to swallow or remember to take regularly. Chewable supplements offer convenience and portability, making it easier for individuals to incorporate them into their daily routine, especially for those who struggle with pill fatigue or adherence to supplementation regimens.

Rise in Demand Among Children and Seniors: Chewable multivitamins are particularly popular among children and seniors who may have difficulty swallowing pills or prefer more palatable alternatives. Parents often choose chewable multivitamins for their children due to taste preferences and ease of administration, while seniors may find them easier to digest and absorb compared to traditional tablets.
