The global Mume Fructus Powder market size is expected to reach \$ 109 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Mume Fructus Powder refers to a powdered botanical ingredient made from the fruit of *Prunus mume*. Mume Fructus usually refers to the dried near-mature fruit of *Prunus mume* that has been processed into dark plum or smoked plum before milling or extraction. The product is typically characterized by a distinctive sour taste, fruit aroma, organic acids, polyphenols and other naturally occurring plant constituents, and is used as a natural fruit powder, sour flavoring material or functional botanical ingredient.

The upstream raw materials of Mume Fructus Powder mainly include fresh *Prunus mume* fruit, dried mume fruit, dark plum or smoked plum, fruit juice concentrate, and auxiliary food-grade carriers such as maltodextrin, starch, soluble dietary fiber or gum arabic when spray drying or instant powder preparation is required. Depending on product positioning, the upstream may also involve organic-certified mume fruit, pesticide-residue controlled raw fruit, or standardized extract intermediates. Downstream applications are mainly concentrated in functional foods, solid beverages, fruit-flavored drinks, confectionery, bakery and snack seasonings, dietary supplements, traditional herbal products, and cosmetic or personal care formulations where sour-fruit flavor, botanical positioning or antioxidant-related marketing claims are required.

In 2025, global sales of Mume Fructus Powder reached approximately 5,679 tons, with an average global market price of around US\$ 12/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 40%.
