Music Streaming Apps are digital applications that provide online music playback services through internet-based streaming technology, allowing users to access and listen to music content without downloading complete audio files. Users can stream songs, albums, playlists, podcasts, and other audio content from cloud-based music libraries through smartphones, computers, smart speakers, automotive infotainment systems, and other connected devices. Music streaming apps typically adopt subscription-based, advertising-supported, or freemium business models, while leveraging personalized recommendation algorithms, artificial intelligence, user behavior analytics, and social interaction features to enhance user engagement. These platforms cover a wide range of audio content, including popular music, classical music, electronic music, podcasts, and spoken audio, and have become the dominant channel for global digital music consumption. Major players include Spotify, Apple Music, YouTube Music, Amazon Music, and Tencent Music. Driven by the development of high-resolution audio, spatial audio, AI-powered recommendations, and connected vehicle entertainment systems, music streaming apps are increasingly evolving toward more intelligent, personalized, and multi-scenario digital audio experiences.
