According to our (Global Info Research) latest study, the global Mutual Capacitance Chip market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Mutual capacitance chip is a precision electronic component designed based on projected capacitance technology. It intentionally creates mutual capacitance effect between row and column electrodes of the touch screen, so that detectable capacitance changes are formed at the intersection of the electrodes. This design allows system electronics to independently measure each node (intersection) in a single screen scan, thereby achieving real-time detection and identification of multiple touch points on the screen. With its high sensitivity and ability to detect multiple touch points simultaneously, mutual capacitance touch chip provides excellent touch response and user experience. It is suitable for application scenarios that require high-precision multi-touch and has become one of the core technologies of the interactive interface of modern smart devices.
