According to our (Global Info Research) latest study, the global MVR Compressor market size was valued at USD 331.3 million in 2023 and is forecast to a readjusted size of USD 515.1 million by 2030 with a CAGR of 6.5% during review period.

MVR stands for Mechanical Vapor Recompression and is an evaporator driven by mechanical energy or electricity. It is a technology by circulating utilization of secondary steam energy generated from evaporator itself. Mechanical vapor recompression uses the secondary steam which generated from evaporator and increases its pressure, temperature and enthalpy through compressor and sends it to the heating room of evaporator to be used as heat steam which the feed liquid can maintain boiling condition and the heat steam will become condensing water. Thus the primary steam which will be disposed can be used sufficiently and increases the heat efficiency, decreases energy consumption and reduces pollution.

As the core component of MVR evaporator system, MVR compressor refers to the machine used for compressing vapor.

Europe is the largest MVR Compressor market with about 41% market share. North America is follower, accounting for about 27% market share.
