Abstracts

According to our (Global Info Research) latest study, the global MXene Material market size was valued at USD 30 million in 2023 and is forecast to a readjusted size of USD 128.4 million by 2030 with a CAGR of 23.0% during review period.

MXene is a class of two-dimensional (2D) materials that were first discovered in 2011. MXene materials are derived from layered transition metal carbides, nitrides, or carbonitrides, known as MAX phases. The term 'MAX' refers to the combination of M (transition metal), A (group 13 or 14 element), and X (carbon and/or nitrogen). 2D layered materials derived from MAX or non-MAX phases were not predicted to exist before this discovery. Unlike most 2D ceramics, MXenes have inherently good conductivity and excellent volumetric capacitance because they are molecular sheets made from the carbides and nitrides of transition metals like titanium. MXenes have already found applications ranging from energy storage to medicine and optoelectronics.

Global 5 largest manufacturers of MXene Material are American Elements, Beike 2D Materials, Sigma-Aldrich (Merck), Nanjing XFNANO Materials and Japan Material Technologies Corporation (JMTC), which make up over 43%. Among them, American Elements is the leader with about 10% market share. Asia-Pacific is the largest market, with a share about 40%, followed by North America and Europe, with the share about 33% and 23%. In terms of product type, Ti-based occupy the largest share of the total market, about 63%. And in terms of product Application, the largest application is Energy Storage, followed by Optoelectronics.
