The global Mycelium Meat market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Mycelium meat refers to a sustainable and alternative protein source produced using mycelium, the root structure of fungi. This mycelium-based meat substitute is cultivated through fermentation processes, using techniques similar to those in the production of traditional plant-based meat alternatives. Mycelium meat is gaining attention for its ability to mimic the texture and taste of conventional animal meat while offering environmental benefits such as reduced greenhouse gas emissions and land usage. It represents an innovative approach to addressing the environmental and ethical concerns associated with traditional meat production by providing a protein-rich food source derived from fungi.

This report studies the global Mycelium Meat production, demand, key manufacturers, and key regions.
