Abstracts

The frequency of invasive fungal infections has dramatically increased in the recent years and has high mortality and morbidity. Accurate and early diagnosis is very important for the appropriate antifungal therapy. Conventional techniques like microbiology, radiological and histological remain the basis of diagnosis but have limited impact on clinical decision making. There is always a need to characterize fungi accurately and quickly, which can be done by mycology immunoassays test. The fungi are parasitic and saprophytic eukaryotic organisms. The diagnostic methods for fungal infections are direct examination, radiology, and fungal culture and non-culture methods.
