Abstracts

Myelodysplastic (MDS) syndrome is a type of bone marrow disorder, where bone marrow is unable to produce healthy and mature blood cells. The immature blood cells called as blasts, get stored in the bone marrow and blood and obstruct the natural function of the hematological system which results in depletion of healthy red blood cells, platelets, and white blood cells. Myelodysplastic syndrome is usually seen in geriatric population and more often in older men than women. This syndrome is characterized by certain chromosomal mutations in Janus Kinase gene which include deletion of q arm in one or more chromosomes and complete deletion of chromosome 5 or 7 and an extra copy of chromosome 8.
