## Abstracts

The global Myopia Management Spectacle Lenses market size is expected to reach \$ 2861 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

Myopia Management Spectacle Lenses are specially designed eyeglass lenses used to slow the progression of myopia in children and adolescents. Unlike conventional corrective lenses that only improve distance vision, these lenses use technologies such as peripheral defocus, multifocal optics, or lenslets to reduce excessive eye elongation, which is the main cause of worsening myopia. They are widely used as a non-invasive and convenient solution for long-term myopia control.
