Myringotomy Knife is a specialized surgical instrument used in otological procedures, particularly during myringotomy, a surgical procedure performed to create an opening in the eardrum (tympanic membrane) for various medical reasons such as to drain fluid from the middle ear (otitis media with effusion), to insert a ventilation tube (grommet) to prevent recurrent ear infections, or to administer medications directly into the middle ear space. The knife is designed with a sharp, precise blade that allows the surgeon to make a small, controlled incision in the eardrum with minimal trauma to the surrounding tissues.
