According to our (Global Info Research) latest study, the global N-Butane market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

N-butane is an alkane with the formula C_4H_{10} . Butane is a highly flammable, colorless, easily liquefied gas that quickly vaporizes at room temperature and pressure. The name butane comes from the root but- (from butyric acid, named after the Greek word for butter) and the suffix -ane. It was discovered in crude petroleum in 1864 by Edmund Ronalds, who was the first to describe its properties, and commercialized by Walter O. Snelling in early 1910s. Butane is one of a group of liquefied petroleum gases (LP gases). The others include propane, propylene, butadiene, butylene, isobutylene, and mixtures thereof. Butane burns more cleanly than both gasoline and coal.

The Global Info Research report includes an overview of the development of the N-Butane industry chain, the market status of Fuel Gas (Natural, Synthetic), Synthetic Rubber (Natural, Synthetic), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of N-Butane.
