Abstracts

N-Butyl lithium (CAS 109-72-8) is the most important organolithium compound. It is widely used as a polymerization initiator for elastic polymers such as polybutadiene and styrene-butadiene-styrene resins. It is also often used as a strong base in organic synthesis in industry and laboratories. n-N-Butyl lithium is usually sold as an alkane solution. Although n-N-Butyl lithium itself is a colorless solid, it usually occurs as a pale yellow solution in alkane. N-Butyl lithium is mainly used as a catalyst for the reaction of synthetic rubber and pharmaceutical intermediates. It can reduce the temperature of the reaction. It is only used as a catalyst and does not participate in the reaction. After the reaction, it is converted into a lithium chloride solution and rises up.

This report studies the global N-Butyl lithium production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for N-Butyl lithium, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
