According to our (Global Info Research) latest study, the global Naval Sonar Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Naval Sonar Systems are specialized acoustic devices and technologies used by naval and maritime organizations for underwater detection, localization, and tracking of objects and obstacles in the marine environment. These systems employ sound waves (sonar signals) to gather information about the underwater surroundings and provide critical data for various naval and maritime applications.

Sonar systems are used immensely in naval warfare as they are effective against mines and help in anti-submarine warfare. Moreover, they are usually separated into passive and active sonar. Active sonar systems emit acoustic waves into the water and listen to their echoes underwater. In contrast, passive sonars do not generate their signals and listen to the sounds produced by other vessels. These days, sonar systems are utilized mainly for fishing, hydrography, oil exploration, marine observation, and nautical charting activities. In addition, the rise in naval feet of the armed forces owing to the procurement of new ships & submarines and the advancement programs for the existing naval vessels are propelling the SONAR System market expansion.

The Global Info Research report includes an overview of the development of the Naval Sonar Systems industry chain, the market status of Submarine Detection and Tracking (Active Sonar, Passive Sonar), Mine Detection and Clearance (Active Sonar, Passive Sonar), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Naval Sonar
