n-Pentyl Pentanoate is a fatty acid ester aroma chemical, also known as pentyl valerate. Its CAS number is 2173-56-0, and its commonly used English names include Pentyl Pentanoate and n-Pentyl Pentanoate. At room temperature, it is typically a colorless to pale yellow transparent liquid with fruity, apple-like, and banana-like notes. The product is mainly produced through esterification of n-valeric acid and n-pentanol, and can also be manufactured through transesterification.

The upstream materials of n-Pentyl Pentanoate mainly include n-valeric acid, n-pentanol, esterification catalysts, solvents, and distillation purification equipment. The midstream process involves esterification, neutralization, washing, dehydration, and distillation purification. Downstream, the product is mainly used in flavors and fragrances, industrial solvents, organic synthesis intermediates, and other applications. Flavors and fragrances represent its main application area, where it can be used in food, personal care, and tobacco formulations to provide fruity notes. In industrial applications, the product can also be used as an ester raw material in certain coatings, inks, and fine chemical synthesis.
