The global n-Pentyl Pentanoate market size is expected to reach \$ 20.46 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of n-Pentyl Pentanoate was approximately 60 tons, with an average global market price of around USD 245/kg, while the gross margin of major manufacturers in the industry was approximately 25%-40%.

n-Pentyl Pentanoate is a fatty acid ester aroma chemical, also known as pentyl valerate. Its CAS number is 2173-56-0, and its commonly used English names include Pentyl Pentanoate and n-Pentyl Pentanoate. At room temperature, it is typically a colorless to pale yellow transparent liquid with fruity, apple-like, and banana-like notes. The product is mainly produced through esterification of n-valeric acid and n-pentanol, and can also be manufactured through transesterification.

The upstream materials of n-Pentyl Pentanoate mainly include n-valeric acid, n-pentanol, esterification catalysts, solvents, and distillation purification equipment. The midstream process involves esterification, neutralization, washing, dehydration, and distillation purification. Downstream, the product is mainly used in flavors and fragrances, industrial solvents, organic synthesis intermediates, and other applications. Flavors and fragrances represent its main application area, where it can be used in food, personal care, and tobacco formulations to provide fruity notes. In industrial applications, the product can also be used as an ester raw material in certain coatings, inks, and fine chemical synthesis.
