## Abstracts

According to our (Global Info Research) latest study, the global N-type Double-sided PERT Battery market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

N-type double-sided PERT cell is a passivated emitter back surface fully diffused cell, using N-type silicon as the substrate, which has the advantages of high minority carrier lifetime and no light-induced attenuation. Due to the use of boron-doped silicon substrates in conventional P-type batteries, boron-oxygen bonds are easily formed after long-term exposure to light, and electrons are captured in the matrix to form recombination centers, resulting in 3-4% power attenuation; while N-type double-sided PERT batteries use N-type silicon substrate, phosphorus-doped matrix makes the cell almost no light-induced attenuation.
