Abstracts

The global Naematelia Aurantialba market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

In 2025, global Naematelia Aurantialba production reached approximately 1,510 tons, with an average global market price of around US\$5.9 per kilogram. Naematelia aurantialba (synonym Tremella aurantialba) is a species of fungus producing yellow, frondose, gelatinous basidiocarps (fruit bodies) parasitic on fruit bodies of another fungus, Stereum hirsutum, on broadleaf trees. This species is mainly distributed in China.

The global market for Naematelia aurantialba is at a critical stage of transition from a rare wild resource to large-scale and industrialized production, with its development primarily driven by growing demand from the health food sector and the high-end cosmetics ingredient market. The current market landscape shows two prominent characteristics. First, production is highly concentrated in China, where regions such as Yunnan, Anhui, and Shandong have achieved year-round continuous cultivation through factory-based models, including modular smart cultivation units, significantly increasing output. Second, product forms are shifting from primary agricultural products toward deep-processed goods. In addition to fresh products, ready-to-eat soups and meal replacement foods have been commercialized, while extracts derived from the fruiting body have entered the cosmetics value chain. Since 2024, these extracts have completed multiple regulatory filings in China as new cosmetic ingredients, marking their formal integration into the beauty industry supply system. Development trends clearly point toward technology-driven modernization across the entire value chain, including precision cultivation enabled by the Internet of Things and AI-based environmental control systems, as well as deeper exploration of medicinal and nutritional functions through collaboration with research institutions. Major growth opportunities arise from its ?medicine and food homology? attributes, which align well

with global health consumption trends and create substantial potential in high value-added segments such as dietary supplements and skincare products. At the same time, China's production technologies and standardized cultivation models are beginning to be exported as integrated solutions to overseas markets, particularly in Southeast Asia. However, market expansion faces both internal and external constraints. Internally, the industry remains in a growth phase, with challenges including high technical barriers for strain cultivation, incomplete industrial supporting systems, and insufficient deep-processing capacity. Externally, as a relatively niche product, *Naematelia aurantialba* still suffers from limited global market awareness and consumer acceptance, which continues to constrain the pace of market penetration.

This report studies the global *Naematelia Aurantialba* production, demand, key manufacturers, and key regions.
