The global Nano based Drug Delivery System market size is expected to reach \$ 9791.6 million by 2029, rising at a market growth of 9.6% CAGR during the forecast period (2023-2029).

The Nano-based Drug Delivery System Market is driven by the demand for more effective and targeted drug delivery methods. Nano-based systems offer improved drug solubility, bioavailability, and reduced side effects. However, a significant challenge is the complexity of nanotechnology and the need for rigorous safety assessments and regulatory approvals. Ensuring the safety and biocompatibility of nano-based drug delivery systems is crucial. Additionally, competition in the market and cost considerations pose challenges, necessitating a balance between affordability and the development of advanced nano-based drug delivery technologies to meet the evolving needs of the pharmaceutical industry while ensuring patient well-being.

Nanoparticle drug delivery systems are engineered technologies that use nanoparticles for the targeted delivery and controlled release of therapeutic agents. The modern form of a drug delivery system should minimize side-effects and reduce both dosage and dosage frequency. Recently, nanoparticles have aroused attention due to their potential application for effective drug delivery.
