## Abstracts

Nano copper powder contains copper-based particles with size ranging from 1 nm to 1,000 nm. Due to its unique characteristics (superior electrical conductivities, thermal conductivities, high specific surface area, and bulk density), it is used in highly specialized applications. Nano copper exhibit unique characteristics, including catalytic and antimicrobial activity, which are rarely observed in micro grade copper. Nano copper also shows superior electrical conductivity, thermal conductivity, high specific surface area, and bulk density as compared with commercial copper.

### Scope of the Report:

This report focuses on the Nano Copper Powder in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The conductive inks and coatings segment offers a wide scope for nano copper and is used in a range of products such as RFID, sensors and detectors, displays, photovoltaics, smart cards, touch screens, EMI and radio frequency interference shielding, OLED displays, and lighting. Also, advantages such as excellent electrical conductivity, lesser cost, and established preparation methods and the rising trend of replacing silver-based conductive inks and the miniaturizing of consumer electronics make nano copper powder one of the vital additions in conductive inks and coatings. The worldwide market for Nano Copper Powder is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
