According to our (Global Info Research) latest study, the global Nano Indium Tin Oxide (ITO) Dispersion market size was valued at US\$ 40.7 million in 2024 and is forecast to a readjusted size of USD 62.4 million by 2031 with a CAGR of 6.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

ITO (IndiumTinOxides) is a nano metal oxide powder composed of indium trioxide and tin oxide. It has excellent electrical conductivity, transparency, heat insulation, UV protection and other functions. According to different uses, the ratio of In_2O_3 and SnO_2 can be adjusted to obtain ITO nano powders with different characteristics. As a nano indium tin metal oxide, ITO solution has excellent electrical conductivity and transparency, and can cut off electronic radiation, ultraviolet rays and far infrared solutions that are harmful to the human body. Therefore, after spraying on glass, plastic and electronic display screens, it can enhance electrical conductivity and transparency while cutting off electronic radiation, ultraviolet rays and infrared rays that are harmful to the human body. The concentration is adjustable from 10%-30%, and the pH value is 2-11. This product can also be dispersed in various aqueous and oily solvents.
