Abstracts

According to our (Global Info Research) latest study, the global Nano Liquid Barrier Film market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The liquid barrier nano film can prevent the liquid dripping on the surface of the substrate from staying on the surface of the substrate through its own liquid barrier performance, but shrink into liquid beads to slide, so as to protect the object to be plated. The contact angle between the substrate surface and the liquid can directly reflect its liquid barrier performance. This is because when the pore size is fixed, the contact angle ? The larger the pore is, the easier it is to use the surface tension of water to block the water droplets out, and the water droplets are not easy to penetrate through the pore. When contact angle ?> 90 °, the substrate surface is hydrophobic, and the greater the contact angle, the better the hydrophobicity.
