According to our (Global Info Research) latest study, the global Nano Microporous Flexible Insulation Plate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Microporous thermal insulation plates is a high-temperature thermal insulation material composited in multi-layer aluminium foils using hollow particles of micro nano silicon powder, its thermal insulation performance is 3-4 times comparing to traditional fiber heat insulation material, which is the best thermal insulation material until now. Thin microporous thermal insulation material with low conductivity factor is applied in high-temperature devices which are subject to the thickness and weight of thermal insulation materials, and is the best, even the only choice.
