Abstracts

A nano programmable logic controller (PLC) is an industrial grade computer capable of being programmed to perform control functions. These controllers can eliminate hardwiring associated with conventional relay control circuits, enhancing the productivity. It is easier to create and change a program in a nano PLC than to rewire the complete circuit.

Scope of the Report:

This report focuses on the Nano PLC in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Nano PLC can communicate with other controllers or computer equipment to perform functions such as supervisory control, data gathering, monitoring devices, and other process parameters of programs. Furthermore, to meet the demands of harsh industrial environments, these controllers are designed to be extremely robust, often capable of withstanding extreme temperatures, humidity, vibration, and electrical noise. Requirement for compact automation solutions, enhanced efficiency, and increased need for high-voltage operating devices have increased the rate of adoption of nano PLCs in energy & power, automotive, and other sectors. Hence, the global nano PLC market is expected to witness moderate growth in the near future, owing to compact size and enhanced durability. However, high implementation cost and current leakage hamper the market growth. Integration of nano PLCs with human machine interface (HMI) is expected to provide lucrative opportunities to the market. The worldwide market for Nano PLC is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
