Abstracts

Nanotherapy is a branch of nanomedicine that involves using nanoparticles to deliver a drug to a given target location in the body so as to treat the disease through a process known as targeting.

SCOPE OF THE REPORT:

This report studies the Nano Therapy market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Nano Therapy market by product type and applications/end industries.

Much of the research in nanotherapy has been largely directed towards cancer therapy. One of the biggest issues with conventional methods is that as the drug product is distributed throughout the body, both healthy and unhealthy (cancerous cells) are affected, which in turn affects the effectiveness of cancer treatment. It is for this very reason that most cancer patients tend to be hesitant when it comes to chemotherapy. However, nanotherapy, which is also referred to as targeted therapy, offers to deliver the molecules to the affected cells in order to help treat the disease without causing other negative effects to the healthy cells.

The global Nano Therapy market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which

cannot be ignored. Any changes from United States might affect the development trend of Nano Therapy.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
