According to our (Global Info Research) latest study, the global Nanobody Discovery Service market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Nanobody discovery service is a nanobody-based technology for screening and discovering nanobodies with high affinity and specificity. Nanobodies are natural single-chain antibodies that exist in the serum of camelids and sharks. Compared with traditional antibodies, nanobodies have the advantages of small molecular weight, good stability, and strong tissue penetration ability. Because they have no light chain structure, they can be flexibly combined with various antibody molecules. They are used in bispecific antibody drugs and cell therapy drugs. It has broad application prospects in the field of disease diagnosis and treatment, such as diagnosis and detection.
