Abstracts

The global Nanobody Discovery Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nanobody discovery service is a nanobody-based technology for screening and discovering nanobodies with high affinity and specificity. Nanobodies are natural single-chain antibodies that exist in the serum of camelids and sharks. Compared with traditional antibodies, nanobodies have the advantages of small molecular weight, good stability, and strong tissue penetration ability. Because they have no light chain structure, they can be flexibly combined with various antibody molecules. They are used in bispecific antibody drugs and cell therapy drugs. It has broad application prospects in the field of disease diagnosis and treatment, such as diagnosis and detection.
