According to our (Global Info Research) latest study, the global Nanocrystalline Common Mode Choke market size was valued at USD 224.3 million in 2022 and is forecast to a readjusted size of USD 307.2 million by 2029 with a CAGR of 4.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Common mode chokes are chokes that use an inductor cored with high permeable material to filter outside interferences while passing current in an electrical circuit. A common-mode choke uses two coils wound on a single core to suppress interference and prevent signal pollution. CMCs cored with nanocrystalline material provide better efficiency, are better suited for higher currents with higher inductances with high frequency ripples, typical of energy applications.
