According to our (Global Info Research) latest study, the global Nanocrystalline Diamond market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Nanocrystalline diamond (NCD) is a thin film of diamond with nanometre size crystals, usually supported on a silicon wafer. However, NCD can be grown on many other substrates such as metals, quartz and other transparent glasses, piezoelectrics etc. NCD has most of the extreme properties of diamond but at a substantially reduced cost, larger area and more practical format.
