Abstracts

Nanoelectromechanical systems (NEMS) can be described as those with critical structural elements at the nanoscale, i.e., at or below 100 nm. In comparison, microelectromechanical systems (MEMS) have critical structural elements at the micrometer length scale. NEMS also have higher surface to volume ratio as compared to MEMS and are useful for applications regarding ultrasensitive sensors and high frequency resonators. NEMS examples include nanoaccelerometers, nanoresonators, piezoresistive devices, etc.
