## Abstracts

Nanofibers are fibers with diameters in the nanometer range. Nanofibers can be generated from different polymers and hence have different physical properties and application potentials.

### Scope of the Report:

This report focuses on the Nanofiber in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growing usage of nanofibers in the textile industry will be one of the primary factors that will drive the growth of this market. With the utilization of nanofibers in textiles, textile companies can now manufacture textiles that are flame retardant and have superhydrophobicity and antibacterial properties. With the rising prevalence of skin cancer, the demand for nanofiber-infused textiles will increase in the coming years since it provides protection against UV radiation. This will subsequently provide considerable growth opportunities for nanomaterials manufacturers.

The worldwide market for Nanofiber is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
