Abstracts

Nanofibers are fibers with diameters in the nanometer range. Nanofibers can be generated from different polymers and hence have different physical properties and application potentials.

Scope of the Report:

This report focuses on the Nanofiber Materials in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The traditional implant materials have short functional life, with failures arising from implant loosening, inflammation, infection, and wear debris. This resulted in the need for the development of new cytocompatible bone substitutes with substantially enhanced functional life to regenerate bone tissues. Titanium and its alloys are widely used in orthopedic and dental implant materials due to their compatible mechanical properties and biocompatibility.

The worldwide market for Nanofiber Materials is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
