Abstracts

Nanoparticles are small particles that fall in the size range of 1nm-100nm and often exhibit a size-related intensive property. Nanoparticles have a wide range of potential applications in the biomedical, optical, and electronic fields. Instruments that are used to observe, track, or analyze the characteristics and functions of nanoparticles are called nanoparticle instruments. These instruments may use different technologies or techniques such as nanoparticle tracking analysis, X-ray diffraction, dynamic light scattering microscopy, and electron imaging among others to track and analyze nanoparticles.

SCOPE OF THE REPORT:

This report focuses on the Nanoparticles Instrumentation in Life Sciences in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Recently, an increasing emphasis on R&D investments and drug discovery has led several small companies to outsource their drug discovery process to subcontract laboratories, while limiting themselves to manufacturing and marketing activities. The outsourcing of the drug discovery process has resulted in the establishment of several subcontract labs, and this trend is expected to continue during the forecast period. The emergence of subcontract laboratories has enabled many companies to outsource their drug discovery process for a mere fraction of the actual infrastructure cost.

The worldwide market for Nanoparticles Instrumentation in Life Sciences is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in
