According to our (Global Info Research) latest study, the global Nanosecond Pulsed Field Ablation System market size was valued at US\$ 509 million in 2025 and is forecast to a readjusted size of US\$ 820 million by 2032 with a CAGR of 7.1% during review period.

The nanosecond pulsed field ablation system uses nanosecond pulse technology. Nanosecond pulse electric field technology can achieve intracellular super electroporation with nanosecond pulse width and field strength exceeding 10KV/cm. It can not only cause irreversible electroporation of the cell membrane, but also cause functional changes in the cell nucleus and mitochondria, and induce cell apoptosis. Nanosecond pulsed field ablation system can shorten the pulse width while increasing the electric field intensity, thereby shortening the electric field action time and avoiding muscle tremors. It can not only achieve local and efficient ablation of diseased tissues, but also retain tumor antigens on the cell membrane. This feature not only helps to stimulate the body's immune response and further eliminate residual tumor cells, but also promotes the regeneration and repair process of normal tissues.
