Abstracts

The global Narrow Linewidth Swept Fiber Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The narrow linewidth swept fiber laser is a fiber laser with a narrow linewidth and a tunable frequency sweep range. It achieves continuous frequency sweeping within a specific frequency range by changing the operating parameters of the laser or using specially designed optical components. Narrow linewidth swept fiber lasers usually have the following characteristics: 1. Narrow linewidth: The frequency stability and coherence of its output light are high, and the linewidth is generally in the range of several gigahertz. 2. Adjustable frequency sweep range: By adjusting the operating parameters of the laser or using specially designed optical components, different frequency sweep ranges can be achieved, from several gigahertz to tens of gigahertz or more. 3. High frequency sweep rate: Able to achieve high frequency sweep rate, usually between a few kilohertz and several hundred kilohertz. 4. High stability: It has high frequency and power stability and is suitable for applications requiring high precision and stability.
