According to our (Global Info Research) latest study, the global Narrowband PLC Chip market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A narrowband PLC chip is a chip used in power line communications (PLC) systems that is specifically designed to communicate over power line networks. PLC technology uses power lines as transmission media to transmit data signals to various power equipment to achieve functions such as remote monitoring, data transmission, and intelligent control. Narrowband PLC chips are mainly used for data transmission in the low frequency range, usually operating in the frequency range below 10 kHz. It uses narrowband modulation technology to modulate data signals onto power lines for transmission. Narrowband PLC chips have lower power consumption and higher anti-interference performance, and can adapt to complex power line environments. Narrowband PLC chips usually include functional modules such as modems, digital signal processors, and interface circuits. It can communicate with other devices (such as smart meters, smart home devices, etc.) to achieve intelligent power management and control.
