## Abstracts

According to our (Global Info Research) latest study, the global Nasal Decolonization market size was valued at USD 106 million in 2023 and is forecast to a readjusted size of USD 169.3 million by 2030 with a CAGR of 6.9% during review period.

Infection prevention bundles increasingly used that include nasal decolonization, and evidence supporting its effectiveness is growing. Although mupirocin (trade names including Bactroban, Centany) is commonly used for nasal decolonization, it may be prudent to consider new nasal antiseptics with which antimicrobial resistance is not an issue.

Nasal decolonization is a promising opportunity for infection control and remains under-utilized. The nasal vestibule is a critical site where pathogens, such as *S. aureus*, colonize. After colonization pathogens can be transmitted, often by hand to nose contact, to others or to the skin where they can cause infections.
