According to our (Global Info Research) latest study, the global Nasogastric Capsule market size was valued at USD 487.7 million in 2022 and is forecast to a readjusted size of USD 832.8 million by 2029 with a CAGR of 7.9% during review period.

The Nasogastric Capsule, also known as Capsule Endoscopy, is a medical device used to examine and monitor the condition of the gastrointestinal tract. It usually takes the form of a capsule that houses cameras, lighting, and wireless communications technology. Patients can easily swallow it or insert it through their nostrils, and the capsule then moves naturally within the patient's gastrointestinal tract, capturing high-quality images and videos for examination and evaluation by doctors.

Nasogastric capsule examination is a non-invasive examination method that does not require the insertion of long tubes or surgical access to the gastrointestinal tract compared with traditional endoscopy. This reduces patient discomfort and risk of complications. Typically, nasogastric capsule examinations do not require general anesthesia or sedation, which reduces patient discomfort and examination risks. Future nasogastric capsules may not only be used for diagnosis, but may also have therapeutic functions, such as drug delivery or topical treatment.
