Abstracts

The global Nasojejunal Tube market size is expected to reach \$ 348 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

A nasojejun tube is an enteral feeding tube inserted through the nose, passing through the esophagus and stomach, with its distal tip positioned in the jejunum. It is mainly used for short- to medium-term enteral nutrition when gastric feeding is unsuitable, such as in patients with impaired gastric emptying, high aspiration risk, severe pancreatitis, severe reflux or post-operative inability to eat orally. The product is typically made of polyurethane or silicone and may feature radiopaque lines, guidewires, weighted tips, ENFit connectors and single- or double-lumen designs; key performance requirements include softness, kink resistance, visibility during placement, ease of insertion and safe indwelling. In 2025, Global Nasojejun Tube sales are estimated at about 6,500 K Units, with an average ex-works price of about 34 US\$/Unit. The nasojejun tube value chain includes upstream medical-grade polyurethane, silicone, radiopaque materials, guidewires, connectors and sterile packaging, followed by extrusion, side-hole processing, radiopaque-line integration, guidewire assembly, connector assembly, dimensional testing and sterilization, and finally serves gastroenterology, ICU, nutrition, pediatrics, oncology, surgery and home enteral nutrition services.

Demand is driven by the standardization of critical-care nutrition, enteral feeding management and care for patients with high aspiration risk. As clinical practice increasingly prioritizes enteral nutrition when the gut is functional, ICU, post-operative, pancreatitis, oncology and elderly dysphagia patients create growing demand for short- to medium-term jejunal feeding. The adoption of ENFit connectors, radiopaque positioning, guidewire-assisted placement and dual-lumen feeding-plus-decompression

designs further improves safety and clinical acceptance, upgrading nasojejunal tubes from a simple alternative to nasogastric tubes into a more specialized enteral nutrition device.
