Abstracts

The global Nattokinase market size is expected to reach \$ 57 million by 2029, rising at a market growth of 7.7% CAGR during the forecast period (2023-2029).

Global key players of Nattokinase include Japan Bio Science Laboratory, Daiwa Pharmaceutical, Contek Life Science, etc. The top three players hold a share over 62%.

Asia-Pacific is the largest market, has a share about 61%, followed by North America, and Europe, with share 19% and 11%, separately.

In terms of product type, 10001-20000 Fu/g is the largest segment, occupied for a share of 57%.

Nattokinase can be mainly used in Dietary Supplement? Dietary Supplement has a share about 88%.

A traditional Japanese food “Natto” is a food made from soybeans fermented by *Bacillus natto*, and has been eaten since about 1,200 years ago. Enzymes that *Bacillus natto* produce by fermentation include protease and Dr. Oshima at Hokkaido Imperial University reported its purification and characteristics. Since then, it was investigated as a serine protease, and, in 1980s, the enzyme that degrades fibrin proteins (a cause of thrombi) was named as “Nattokinase”. Nattokinase is found in the sticky part of Natto.

Functions of Nattokinase include directly degrading a fibrin (the main component of thrombi), activating pro-urokinase (precursor for urokinase that is a thrombolytic enzyme in the body) and increasing the amount of tissue plasminogen activator (t-PA) that produces a thrombolytic enzyme, plasmin. In addition, recent research has

revealed that Nattokinase has a function of degrading plasminogen activator inhibitor, PAI-1 and reducing the euglobulin lysis time, and therefore, it has a function of improving the thrombolytic activity. Furthermore, the reduction of blood pressure has also been confirmed.

This report studies the global Nattokinase production, demand, key manufacturers, and key regions.
