Abstracts

The global Natural Absorbable Sutures market size is expected to reach \$ 232 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Natural absorbable suture is a disposable sterile suture material made from natural biomaterials that can be gradually degraded through enzymatic hydrolysis and tissue absorption after implantation into the body. Typical representatives are ordinary intestinal suture and chromed intestinal suture, whose main components come from animal intestinal collagen protein. It can provide necessary initial tensile support for a certain period of time after surgery, and then be absorbed by the body as the tissue heals without the need for secondary suture removal. It is commonly used in soft tissue, mucosa, obstetrics and gynecology, oral cavity, and some general surgical suture scenes. In 2025, global Natural Absorbable Sutures production reached approximately 29.36 M Units, with an average global market price of around US\$ 5.13 per Units. Natural absorbable sutures belong to a mature and gradually shrinking sub category, and their demand foundation is still stable. They mainly come from clinical scenarios with high requirements for biocompatibility, inconvenient or cost sensitive suture removal, but their overall growth is significantly slower than synthetic absorbable sutures. With the improvement of surgical precision and standardization, the clinical requirements for predictable absorption time, batch consistency, and controllable tissue response continue to increase, making synthetic absorbable sutures continue to replace natural intestinal sutures in most surgical scenarios. The market positioning of natural absorbable sutures is gradually concentrating on specific departments, specific surgical procedures, and some emerging markets. The future competition focus of this category is not on technological breakthroughs, but on the stability of raw materials, consistency of quality, compliance and cost control capabilities, as well as maintaining stable supply and cost-effectiveness advantages in sub sectors such as dentistry, obstetrics and

gynecology, and veterinary use.
